Overview Features Object-Oriented Technology. SAP2000 offers users the ability to develop applications using an object-oriented paradigm. This allows users to develop their applications using a more streamlined approach than with older programming languages. Efficient SAP2000 Programming. Due to its object-oriented framework, SAP2000 provides a more streamlined way of programming than with traditional programming. SAP2000 also allows users to create model components in the form of classes. Extensible. SAP2000 allows the user to extend its object-oriented framework by using class inheritance and generics. It can be extended with a variety of external libraries and other SAP2000 plug-ins. Data Access. SAP2000 provides a data access API that allows users to easily access a variety of data sources. It is based on an access API that has been in development for several years. Analytics. SAP2000 includes the ability to connect to and analyze data from a variety of data

sources. This includes the ability to connect to a variety of database, extract, and graph data. It also includes the ability to connect to and analyze data from a variety of file formats. Automated Validation. SAP2000 provides a mechanism to validate data that has been inserted into a table or display into the form. Fast Reporting. SAP2000 provides an interface that allows users to create reports with the use of a relational database. It can quickly report on large amounts of data in a manner that is easy to use. Business Intelligence. SAP2000 provides an interface that enables the user to analyze data that has been extracted from a relational database. It can allow the user to analyze data that has been stored in a variety of file formats.
